Hack

THE WHALE

The hackathon revolves around Cyber Security, to enforce cyber defense and to develop new and competitive solutions in the Cyber security field.

Hack the whale is open to people of all ages and technical skills: from beginner to advanced. It consists of a series of challenges that participants must face.

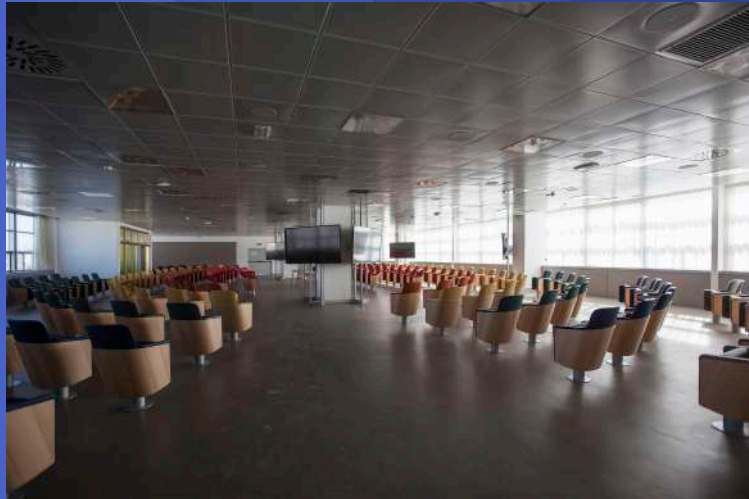

The challenges will be chosen among this categories:

- 1) "Casing the environment" techniques:
 - footprinting;
 - scanning;
 - enumeration.
- 2) Attacking a vulnerable web application;
- 3) Escalating privileges on a hacked network node;
- 4) Showing how to "pwn" a node hosting a vulnerable database;
- 5) Showing how to use the most widely deployed hacking tools.
